

ProTech™ Bearing Isolators

ProTech bearing isolators further complement Parker's solutions program by offering an answer for applications where improving the mean time between failure (MTBF) is critical. The ProTech family relies on true non-contact labyrinth seal technology to provide 100% exclusion of contaminants and 100% retention of bearing lubrication for the life of the bearing. Fourteen standard profiles are available to allow for ease of retro fitting most equipment. Typical size range is for shaft diameters from 0.492" (12.5mm) to 38" (965mm). ProTech has also been independently tested to IEEEIP55, IP56, IP66 and IP69k.
