CHROMASSURE COLORED O-RINGS

DESCRIPTION : Parker Seal CHROMASSURE materials offer high-performance, color coded o-rings with material properties comparable to that of their black rubber counterparts. CHROMASSURE provides vivid color identification by the use of basic material-polymer. With CHROMASSURE o-rings and seals, positive color identification is an integral part of the materials, beginning with the initial blending of the compounds' ingredients. The color endures the life of the o-ring; it cannot be worn off.
